

For administering the entire life cycle of all General Insurance lines of business

ALIS-GI is a dynamic and flexible suite of components for administering the entire life cycle of all General Insurance lines of business. One system can be implemented across all divisions and products of a company, improving operational efficiency. The system is multi-language and multi-currency and can be implemented across all your global divisions, whilst still being tailored to local needs in each location.

ALIS-GI has a powerful and intuitive product design tool which empowers your business users to design even the most complex products without any programming.

ALIS-GI is a flexible component-based solution for administering the entire life cycle of all General Insurance lines of business.

Key advantages:

ALIS-GI improves operational efficiency.

One system can be implemented across all divisions and products of a company.

The ease of use of the customer-centric system and automation of complex tasks supports a lower cost per transaction.

ALIS-GI increases speed to market.

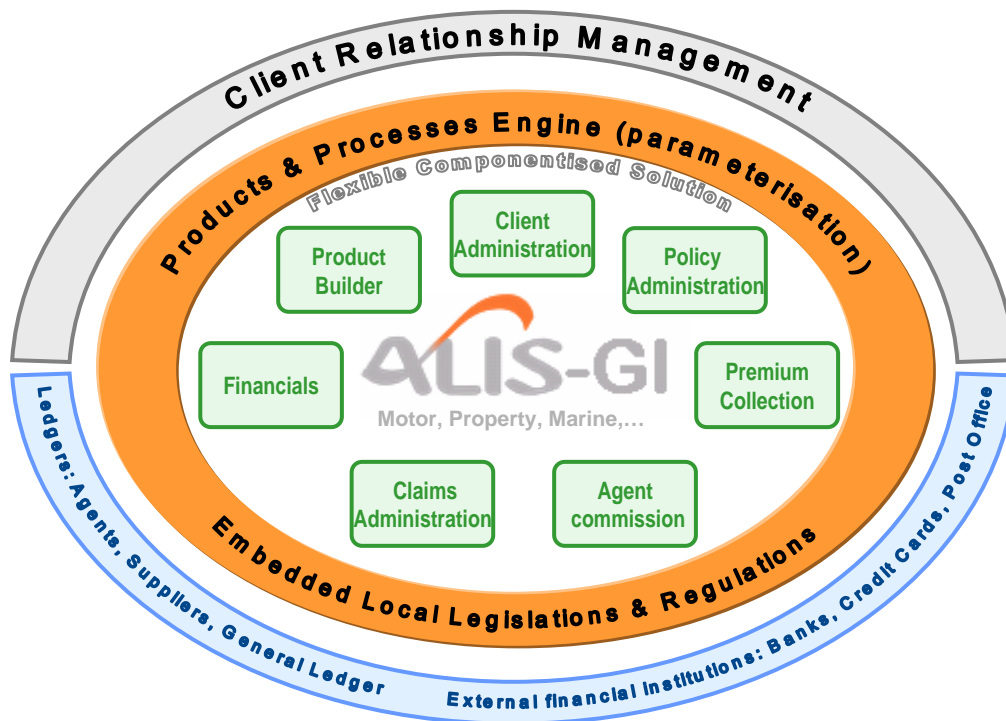

Your business users can build even the most complex of your products and all of the supporting business logic and workflow – without IT involvement.

Product components can be cloned or copied to speed design even further.

ALIS-GI the safe foundation to secure your investment.

The modular nature and the three-tier architecture of the system allow total scalability and flexibility.

A componentized system delivers the cost effectiveness of a package, together with tailoring to your changing business needs and differentiators.

The Business Dimension

Speed-to market: You need to be able to respond to rapidly changing market conditions including the economy, regulation and competitors. As your business users control product build, and absolutely no programming is necessary, products can be built and launched in days and changes made in minutes. The ability to re-use product components and clone existing products speeds up product development with ALIS-GI even more.

Speed of implementation: ALIS-GI has a breadth of insurance features available, whilst comprehensive table-driven parameterization ensures that the system can be configured to your business needs (with no programming). ALIS-GI has all the cost advantages of a package but through user-defined tailoring can support your business differentiators.

Operating efficiency: One system can be implemented across all divisions and products of a company. The ease of use, straight-forward training, and automation of tasks supports a lower cost per transaction.

Improve customer service: Automation of previously manual processes and the ability to access all information on a customer quickly and efficiently speeds up your ability to handle customer enquiries and offer a greater depth of service.

Global operations: ALIS-GI is a multi-lingual, multi-currency solution that can be implemented across your global divisions whilst still encompassing local differences in taxation, regulation, products and workflow. FIS Software is a global company, able to support your implementation across the world.

Reduce claims costs: ALIS-GI holds all data at a single source and utilizes browser-based technology to provide personalized secure access to all users allowing the claims process to become streamlined and efficient. Multiple types of users across multiple locations can be catered for so if you wish to outsource part of your claims operation, the outsourcing centre can access the same information as your internal centre.

Protect your investment: The modular nature and the three-tier architecture of ALIS-GI allow total scalability and flexibility. The system can be continually tailored to your changing business needs.

The Technical Dimension

Low cost of ownership: ALIS-GI utilizes browser-based three-tier architecture on a Microsoft platform with its associated low infrastructure and running costs.

Your business users can build and maintain products without the need for costly internal or external IT expertise.

Wise management of your business data: All data and transactions from every area of your business are preserved in a detailed, timely and accurate manner in ALIS-GI. You can refine your business processes to maximize underwriting profits.

All data items are maintained in a normalized method, and can be easily exported to your selected reporting tool.

Inter-connect with business: Using XML structured interfaces ALIS-GI object-oriented components integrate easily and seamlessly into your existing infrastructure or can be implemented as part of a larger architectural solution.

Keep your business secure: ALIS-GI has core security and authorization features, controlling areas of user profile, group and logon functions.

Authorization levels are detailed and totally configurable including which areas of the system are accessible, which tasks can be performed and to what limit.
