

❖ *One complete software package
for all life and pensions products*

The Company's flagship product

ALIS enables insurance companies to manage the entire lifecycle of their insurance and investment products, from initial customer enquiry through to final product maturity. **ALIS**, which was built from the ground up, provides a combination of high functionality and low risk implementation, and a perfect fit with best of breed software solutions for most life and pensions company's business processes.

ALIS is a single platform package, based on software components that contain embedded insurance knowledge on all group and individual life, pensions and investment products, globally.

ALIS' parameter-driven components can be customized to meet both local legislation and regulatory requirements and individual business models. Using XML structured interfaces, **ALIS** integrates easily to become a seamless part of a customer's existing IT system.

ALIS- The evidence

Insurance companies are already achieving significant business benefits as a result of implementing **ALIS**:

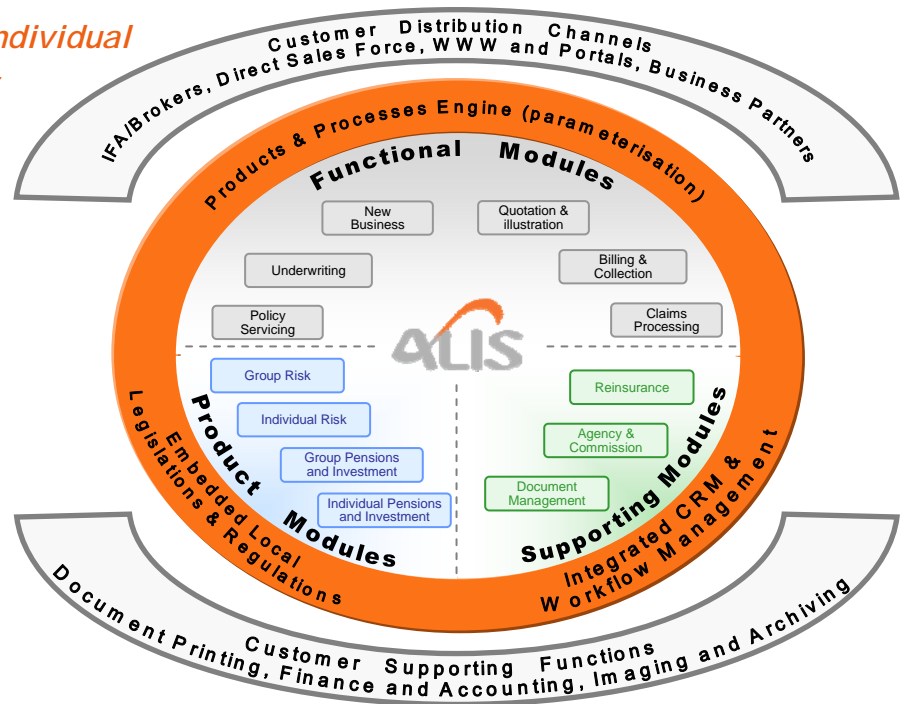

- ❖ A new insurance company in the UK moved from set-up to **launch in 9 months** by building its operations on **ALIS**. This compares favorably with the industry average set-up time of between 18 and 24 months.
- ❖ A life and pensions company in the UK **reduced its administration costs by 25%** without business process change just by switching to the **ALIS** platform.
- ❖ A European life and pensions company has shrunk its development and go to market timeframe for **new products down to one month**.

Technology highlights

Today **ALIS** is in its fourth generation, it went live in early 2000 and benefits from over 400 man years of development and cutting-edge technology. **FIS** continually invests in its ongoing development to ensure that it meets the ever changing needs of life and pensions companies.

ALIS is a web-based application that is delivered and serviced on the internet. It is multi-language and multi-currency, and includes generic 'compliance' features that make it easier to satisfy the demand of regulators. **ALIS** includes fully integrated workflow and underwriting capabilities as well as the ability to create illustrations and policies.

ALIS is accessed from a standard user interface that is common to all components in the suite. This graphical client workbench provides a wide range of features such as dynamic selection criteria, dynamic sort, dynamic filtering, display options, on-demand custom graphic presentation, window splitting, data exporting and custom layouts for each list display.

ALIS can scale up to support the policy and customer volumes experienced by tier-I life and pensions companies, and can be extended in both small and large increments to fit the changing business requirements of insurance companies.

ALIS is technology agnostic and can work with any relational database, including Oracle, IBM DB2 and Microsoft SQL Server. It can operate across multiple platforms, including Unix, Linux, or Windows, or a combination of.
